

Easy Access Watertight Closure System

A versatile, watertight "dome-type" closure system for protecting spliced connections of communication cable in aerial applications.

The Easy Access Closure System is a compact, easy to use, visually appealing method of protecting up to 300 copper conductor pairs in aerial applications. Each closure provides watertight protection for splice bundles, connection terminals and other "outside plant" electronic componentry. A minimum of metal component parts provide excellent protection from corrosion while high impact resistant plastic provides UV protection for the enclosures contents. Simple hand tools are all that is needed to successfully install or re-enter the closure which eliminates cable drills, heating tools or open flames.

Features

- Molded from corrosion & UV resistant plastic.
- No metal components.
- Lightweight yet strong.
- Re-enterable and reusable.
- Cover is easily removed to access wires for maintenance without disturbing cable entry seals.

Applications

- For aerial applications.
- For use in new construction and for cable repairs and maintenance.
- Can be mounted on wooden, concrete or metal poles.

Sizes

- 3 sizes available to protect from 10 to 300 copper conductor pairs.
- Will allow from 1 to 6 cable entries, 0.40 (10mm) to 1.37 (33mm) in diameter.
