

# Multi-Service 10-pair Terminal Housings

A multi-service housing for terminating up to 10 pairs while allowing up to 100 pairs to "loop through" the enclosure.

Multi-Service terminal housings are especially functional in that up to 10 pairs may be terminated inside the enclosure while up to 100 pairs may be "looped through", a technique that eliminates the need for an additional joint or closure in close proximity to the terminal housing.

## Features

### Rugged, compact design.

- Molded from high impact and UV resistant plastic.
- Lightweight and cosmetically appealing.
- All metal parts of non-corrosive materials
- All bonding and grounding hardware included.
- Rubber grommets included for all cable entry/exit ports.
- Standard DIN rails included.
- DIN rail doubles as an earth point.
- Easy access to both sides of the terminal blocks.
- Minimum twenty year life cycle tested.

## Configurations

- Fully populated, protected or unprotected terminals are pre-installed and cable ready.

## Applications

- For wall or pole mounting.

## Sizes

- For organizing and protecting up to 10 terminal blocks.

**Cricket Terminal Blocks** with interchangeable bridge module and standard 5-pin footprint to accommodate gas tube, hybrid or solid state protection.

**Termcon Terminal Blocks** with 3-pin footprint in an always closed position - no bridge module required to complete circuit.
